

The Novaminex team has a wide range of experience developing new hardware and software systems for mining exploration. The Novaminex team is available to develop proprietary technology for clients. Alternatively, Novaminex is conducting a number of cooperative technology development projects which are co-funded by Novaminex and a group of participants.

Specific team skills include:

- Algorithm development for geophysical data processing
- Programming in C++ using the Qt framework
- Mechanical design
- Electronics design
- Prototype development, testing and refinement
- Magnetic induction sensor design
